Remarks

Cannot be flush mounted: see installation instructions for inductive sensors with extended switching distance 939224. Avoid pressure and contact in the area of the clear zone cap.
The sensor is functional again after the overload has been eliminated.
EMC: For operating conditions with noise sources
External protection circuit is required. Document 825345.
When using an AC bridge, an electrolytic capacitor ≥10µF/40V parallel to Vs is recommended.
For more information about MTTF and B10d see MTTF / B10d Certificate

Indication of the MTTF- / B10d value does not represent a binding composition and/or life expectancy assurance; these are simply experiential values with no warranty implications. These declared values also do not extend the expiration period for defect claims or affect it in any way.
